WI	2.4	2.6	0.0	8.3	0.6	
Total	91.2	183.5	3.8	283.6	209.6	

#### Harvest 2009:

**NW MI** - Fruit reported to be nice and pitting well. There are some color and wind whip concerns noted by some. There have been some rains recently; the consensus seems to be that this area will pick long of the estimate.

**WC MI** - Production to date plus diversions brings this area pretty close to estimate. There will be more production likely in week 6. Quality has held up nicely.

**SW MI** - Harvest is over.

**NY** - Quality fair to good. Harvest will probably exceed est.

**OR** - Cherries still nice.

**UT** - Excellent quality. Will exceed est.

**WA** - Quality is okay. Not sure if state will reach est.

**WI** - Quality very nice.
