CONGRATULATIONS. HARVEST IS DONE!

NW MI - This area finished its harvest in Week 9. There was not a great deal of production for the week.

Crop Size - At 297 million, the crop was quite sizable. It was considerably larger than had been anticipated in June. As you see from above, it was larger than last year's crop.

Quality - In general the crop was of very good quality. Unfortunately, a couple of the regions had some weather events that impacted their overall quality. Nonetheless, most of the cherries were harvested and processed.

Adjustments - Please recall that everyone does their best to report good data. There may be updates and adjustments.
