Harvest 2006:

OR started harvest this week. Quality good, but fruit smaller.

PA will continue through week 3. Quality started good, but tapered off due to Mother Nature and weather issues.

SW MI production started, stopped and started again in week 1. Harvest is in earnest now. Some are picking larger than they estimated, others about on target.

WC some product moved in week 2. Volumes will increase quite a bit in week 3. Wind in area has produced some early quality concerns.

NW Although quite light, harvest started in week 2. Quality good.
